

CPA-P-307i-RS

- hydrostatic level transmitter
- submersible probe, diameter 27 mm
- nominal range: from 0...4 mH₂O up to 0...200 mH₂O
- output signals: digital RS-485 / Modbus RTU or HART
- stainless steel probe and sensor
- accuracy 0.1 % span
- small thermal effect, excellent accuracy and long term stability
- optional: different kinds of cables and seals

The precision stainless steel probe **CPA-P-307i-RS** is designed for continuous fill level and level measurement of water and liquid mediums. Housing material is 1.4044; the sensor diaphragm is made of 1.4435. Standard sealing material is FKM; other materials are available on request. The CPA-P-307i-RS features high accuracy of 0.1 % span and a very small thermal error. Basic element is a high quality stainless steel sensor with a digital electronics with microprocessor and 16-bit analog/digital converter. Thus it's possible to compensate the sensor specific errors as non-linearity and thermal errors actively resulting in a level transmitter with excellent measuring properties at an unusual competitive price.

PREFERRED AREAS OF USE ARE

Water / filtrated sewage

environmental engineering: water supply, sewage treatment
 depth or level measurement in wells
 ground water level measurement
 level measurement in open tanks
